Technical Experience

- Software Developer Intern** — Cortico Health, Vancouver Jan 2026 – Current
- Designed and integrated a browser extension-based fax platform, allowing customers to reduce document processing time by 97% and reliably processing 2,000+ branded monthly transmissions.
 - Resolved high-priority production escalations by analyzing Sentry telemetry and application logs, delivering same day hotfixes and implementing code guards to prevent recurring errors.
 - Restored health to Vitest unit suites by fixing underlying bugs, reducing skipped tests by 71% to ensure we have dependable Jenkins CI/CD pipeline runs.

Projects

- InsightsAI (StormHacks 2025 Hackathon)** — React, Supabase, Node.js October 2025
- Developed a full-stack application in 24 hours using React, Node.js, and Supabase, routing natural language queries through AI models to generate raw, structured JSON pay-loads for business analytics.
 - Engineered dynamic visualization engine by transforming structured LLM JSON outputs directly into interactive Mermaid.js diagrams and charts, giving non-technical users immediate visual business insights.
 - Designed production-ready Supabase backend with schema-validated data flow, handling async LLM responses and real-time frontend updates to deliver clean data interpretation under tight hackathon deadlines.

- NHL Game Predictor** — Python, Pandas, Seaborn, SciPy May 2025 - Aug 2025
- Built end-to-end Python ETL pipeline processing 218,000+ game records across 16 seasons, joining REST API standings data with scraped game logs to resolve shootout edge cases.
 - Optimized machine learning classifiers via systematic hyperparameter tuning across tree depth and leaf size, training Random Forest models that achieved 59% accuracy for 2024 and 61% peak accuracy.
 - Engineered contextual feature set using Pearson correlation analysis to quantify impact of goalie save percentage, back-to-back schedule fatigue, and home-ice advantage, visualizing insights with Seaborn.

- Shape Up Fitness** — HTML, CSS, SpringBoot Jan 2024 - Apr 2024
- Utilized Spring Boot to implement backend logic following the Object Oriented MVM pattern, enabling efficient data tracking and structured application flow.
 - Coordinated with the client through multiple design and feedback iterations to **gather requirements**, emphasizing communication and planning for the project.
 - Delivered features on time by actively participating in **agile practices** and iterative development cycles, demonstrating organizational skills.

Technical Skills:

Languages: Python, Typescript, Java, Javascript, SQL

Technologies: React, Docker, Sentry, Jenkins, Django, Vitest, Playwright, Postgres, Pandas

Education

- Simon Fraser University** GPA: 3.1 Sept 2022 – Present
- Third Year in Bachelor of Science, Major in Computer Science
